

Cabana Consumer

Permissions Issue

1. On the splash screen the user is being asked for media permission, and if the user denies it, the app gets crashed. We also need to explain to the user why we need it on the splash screen although the user has nothing to do with splash.
2. Also we need to handle precise and approximately location permission on splash. Check in the video, the app is stuck if we select an approximate location or allow the user only one time permission.
3. [Click here to see video](#)

Login / Sign up Flow

1. Google with continue not working [Click here to see video](#)
2. Sign up form validations issue like we can proceed with one letter password. No phone number validation. Please add all input format validations.
3. Screens stacking issue.
4. Google maps stocks, app jerks/hangs when user moves his pointer and when you go to search the location, ui expands and miss behave and never search any location
5. When I click on sign up nothing happens and on clicking again it told me the user already exists.
6. After it, I went to login but after login on the OTP screen resend button keeps adding stacks of screen, on the back click there are more OTP screens.
7. [Click here to see video](#)
8. I never logged in this user but after 2-3 times opening the application , the logged user is changed, which I never know. [Click here to see video](#)

Main Issues

1. When I select a vendor , I can see 255 reviews but the vendor was just created. Also reviews was not clickable (Ignore if its not within scope)
2. When I click on the cart tab, and switch order time and info tabs, While switching I can see some screens although data is not available. Means while switching tabs some screens shows for an instance and then vanished
3. On wallet transaction history I can see title and filter icon although there is no transaction.
4. While adding some top up , I click once on add but it added twice the top up e.g I added 22 but after transaction I received 2 transactions of 22.
5. Also adding top up and wallet balance fields are not formatted.
6. [Click here to see video](#)
7. Invalid authorization & miss behavior of the application [Click here to see video](#)
8. I can see after selecting a service some vendors don't have any title. No rating.
9. After adding service into the cart and paying via wallet not working. Screen show loader and nothing after it.
10. [Click here to see video](#)
11. Also check service was deactivated from the dashboard but it was available to the customer.
12. App crashes often randomly, some stack traces. [Click here to see the video.](#)
13. When I select a category I can see empty vendors and empty data against them, even though no time slot was available. Was not able to complete the order. [Click here to see video](#)
14. When I selected a specific vendor, things went strange. [Click here to see video](#)

Cabana Vendor

Permissions & Login Issues

1. All permission issues are just like consumer app.
2. Pin location and location search issue is same as consumer.
3. Form validations are just like consumer app, need to be optimized.
4. Unable to sign up as an individual.
5. Same otp stack issue but in the vendor app on OTP screen the user was not able to see his phone number before the edit icon.
6. Somehow the user got logged in but strangely it was not the user which i registered.
7. App also crashed during this.
8. [Click here to see video](#)

Main Issues

1. When a service is added, after some time updating it, the sub category drop down gets empty.
2. Time slots are not updating on the days page after adding. Plus we can add time slots with 1 min difference which is not practical.
3. Change language from sidebar, bringing me to the login page while I'm already logged in.
4. [Click here to see video](#)
5. Was not able to add a new offer. Also validate form properly [Click here to see video](#)
6. Adding new package behavior was strange. The first package was approved and the second was not. Also forms need to be validated before. Also when I can I can see silver and 699 SAR by default unless the package is loaded.

7. [Click here to see video](#)
8. Adding new service forms not validated, even added services shows me null. Drop down often get empty. [Click here to see video](#)
9. Change language brings me to login plus help form is not validated, profile is empty, settings page shows me wrong profile. [Click here to see video](#)
