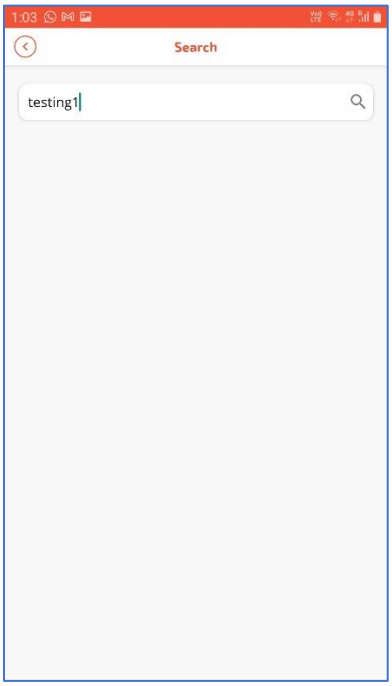
Learn'em

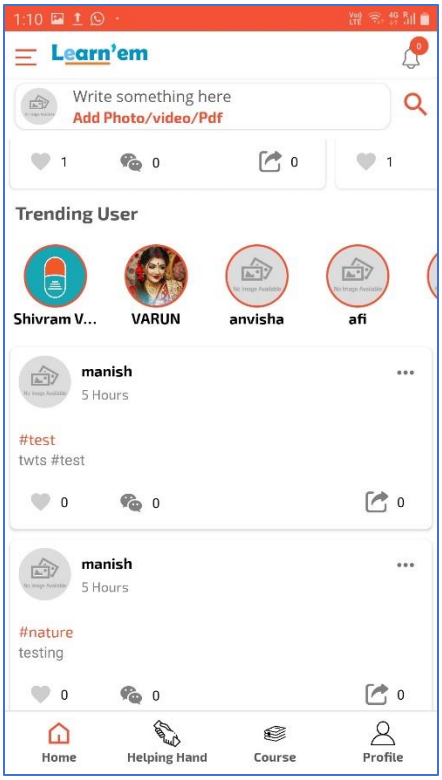
Feedback November 1st, 2022:

Please give attention towards following feedbacks:

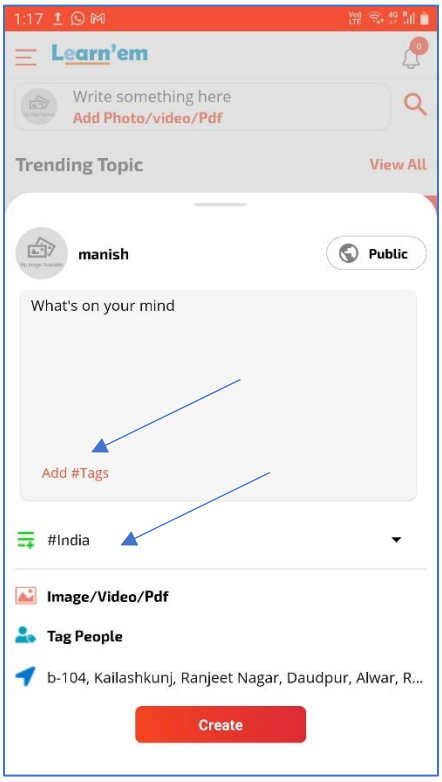
1. When someone searches a string that is not present in the application, then blank page is shown, instead of blank page, page not found like message should be displayed.



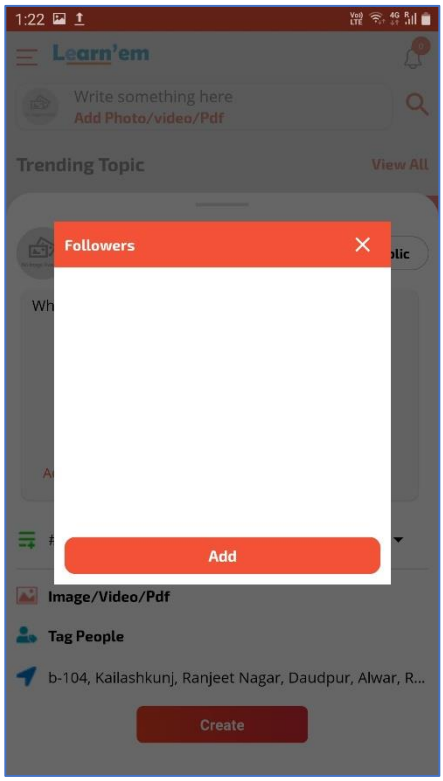
2. Fonts are looking very small, font size can be increased slightly
3. No uploaded posts are showing on the main user screen. And even when the user uploads a post, his post is not showing on the user screen.



4. Where will the ads be displayed?
5. When a logged in user uploads a post, he has to enter hash tags twice.

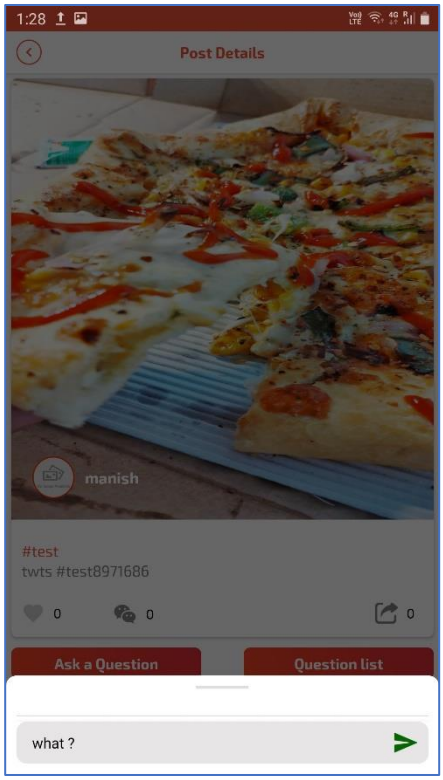


6. User is unable to tag anyone in upload



(Add button not working)

7. User profile not showing uploaded post previews.
8. Where a user can update his/her profile?
9. When opening a user's post to ask a question, the submit button is not working. Can the question asking function be put on the main screen? Similarly, in the application, the buttons for post, course, about, following, etc. are either not working or are not working smoothly. (UI might be improved)



(Submit button not working**)**

10. When clicking on the user in the helping hands, neither the user post nor the user profile opens.
11. Privacy policy, terms and conditions are not updated
12. Course list is blank
13. Analytics showing not updated as I requested.
14. Hamburger icon and display not updated as I requested.

Lots of updates which I requested in feedback of October 7th, 2022, are not completed. Please do it ASAP. I have expectations from my idea and your work, but work is running late so it is requested that you complete this idea in a time bound manner so that I can move it forward.

Thank you

Manish Kumar (RAS)
