Project

London Market Apps Remediation (March 2022 – Sept 2024)
Domain: Insurance, specifically **Lloyds of London**
Description:
- Spearheaded remediation of 4 Java applications for Lloyds of London's unique insurance market.
- Led migration and upgrade to newer Java version, aligned with Key Design Decisions (KDD).
- Leveraged Spring Boot, Spring Data JPA, and Oracle for robust backend functionality.
- Developed using Spring MVC, Hibernate with JPA, and RESTful Web Services for seamless integration.
- Utilized RedHat JBoss EAP 7.3 and Maven for efficient project management.
- Ensured high code quality with JUnit, Log4J, and comprehensive bug tracking via SonarQube.
- Collaborated with DevOps for enhanced security and performance, resolving configuration issues.
- Active participation in Agile methodologies, fostering effective team communication and practices.
- Documented project progress and insights using Confluence and Jira for knowledge transfer.

Role :
- Collaborated on services for claims processing and user management in Lloyds of London marketplace.
- Proactively addressed challenges with proof of concept solutions, integrating with the team.
- Key role in enhancing deployment processes and pipelines, working closely with DevOps.
- Conducted rigorous code reviews and testing to maintain high code standards.
