Not Done

1. Dashboard info should be real time. I always need to refresh the page to see the newly added count to any section visible on main.

2. When I clicked the active category, I got to page **404.** Rest of the services are not clickable but more info.

3. I noticed, on delete action in the dashboard, we are not asking users for the confirmation which is a general practice. E.g delete banner or delete vendor.

13. If a vendor is deleted, the vendor app is stuck on the splash screen for limitless time.

14. When I click to send notifications, nothing happens on the app side, just a sound is being played. It is supposed to be a push notification. Also there is no control over sending push notifications like what if you only want to send push notifications to vendors ? What if I only want to send android users a notification.

Missing Requirements

1. Payment Management

2. Offer Management

3. Notification Management

New Points

- We have category list option on side the menu but don't have sub category list option.

- When I click on add a new subcategory on the dashboard, the server breaks.

- Adding new files for banners should be restricted to file type images only. For now we can select a video or a pdf as well for the banner.

- I have been adding webP images which were being added while creating a new banner, but after adding the new banner, neither the dashboard shows that image nor the application shows.

- Add banners fields are not validated.

- What if we want to show the same banner on top and bottom ?

- DOB, gender etc are missing on the dashboard for service providers. There is no document we can see on the dashboard which has been uploaded by the service provider while signing up.

- Deactivated provider from the dashboard was able to use the application. Deactivated means deactivated.

- Add new provider sign up does not match with the sign of the vendor on the app side.
